INTRODUCTION

❑ **Project Title:** Development of Interactive Dashboard in Excel.
(Chitra Collections Annual Report 2024)

❑ **Crafted By:** SAYANTANI DALUI.

❑ This Project involved the development of an interactive dashboard for sales data analysis, utilizing Excel pivot charts and slicers to enable dynamic Visualization. The dashboard provided valuable insights into customer demographics, sales trends and platform performance for Chitra Collections in the year 2024.

AIM OF THE PROJECT

- To create an interactive and insightful dashboard for analyzing Chitra Collections Annual Performance for the year 2024.

Goals:

- Visualize sales trends and customer demographics of the store.
- Use Pivot charts, Pivot tables and Slicers for insights.
- Enable quick and data-driven decision-making.
- Improve data accessibility and understanding.

IMPLEMENTATION

1. Data Collection & Cleaning

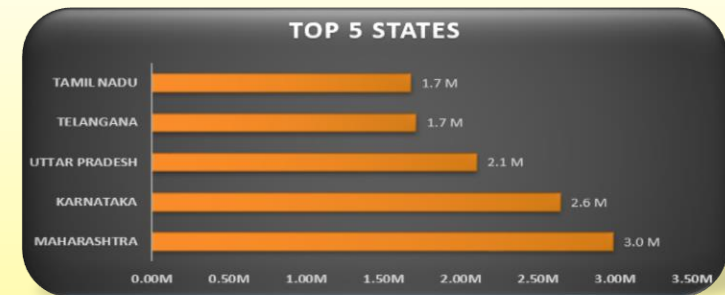

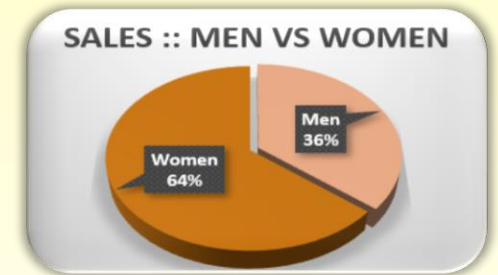

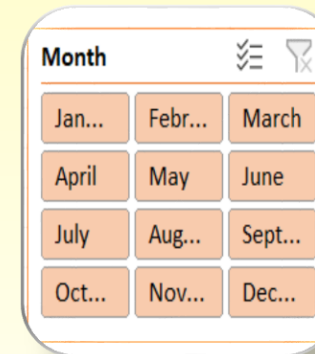

- Imported raw sales data into Excel.
- Removed duplicates and null values.

2. Data Processing

- Added custom columns to enhance data analysis (ex: Age Group and Month column) for better visualization.

3. Dashboard Development

- Generated six Pivot tables for orders, sales, customer demographics, regional sales and Platform Performance.
- Designed six Pivot charts for each pivot table for visual representation.

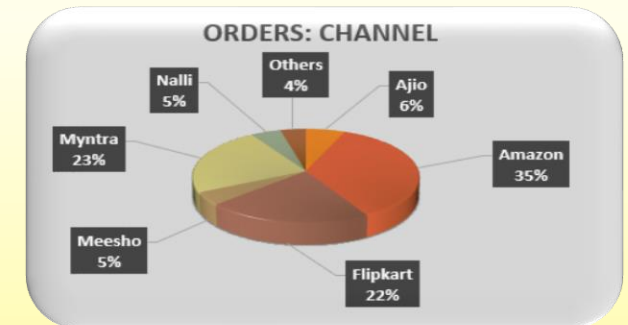

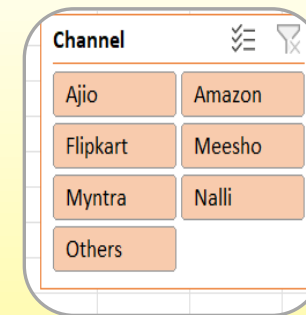

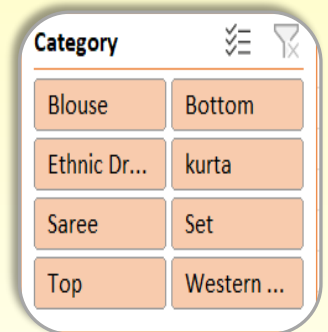

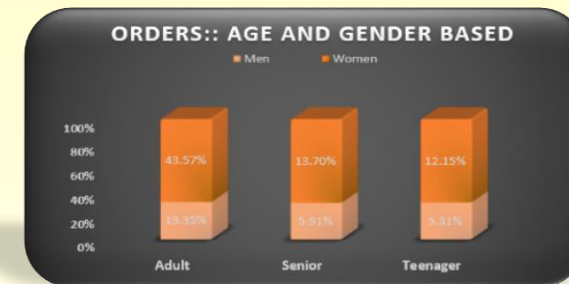

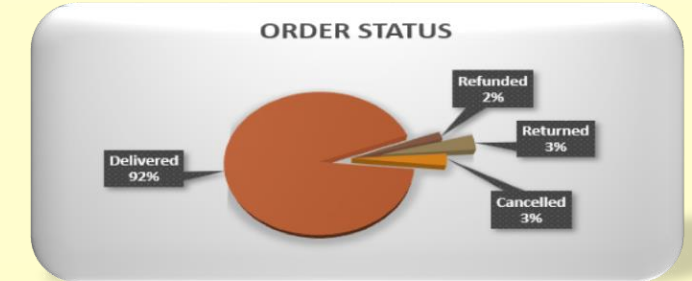

IMPLEMENTATION

4. Adding Slicers

- Integrated Month, Category and Channel Slicers to filter data dynamically, making the dashboard interactive.

5. Dashboard Integration

- Combine all pivot charts and slicers into a single Excel sheet, forming an interactive dashboard. Ensure the dashboard is user-friendly and visually appealing by arranging charts and slicers logically and consistently.

KEY COMPONENTS OF THE DASHBOARD

Description of the Pivot charts and Slicers used::

❑ Six Pivot Charts

1. Order and Sales
2. Order Status Overview
3. Sales by Gender
4. Top 5 States by Sales
5. Age group Demographics
6. Platform-Based Sales

❑ Three Slicers

1. Month-Wise data filtering
2. Product Category-Wise data filtering
3. Platform-Based data filtering

ESSENTIAL FEATURES

- **Utilization of Pivot charts**

Provides various perspectives on the data for in-depth analysis.

- **Integration of three slicers**

Allows dynamic filtering to view specific data segments easily.

- **KPI Visualization**

Highlights key performance metrics for quick insights

- **User-friendly interface**

Ensures a smooth, simple user experience for easy navigation.

- **Interactive elements for data analysis**

Enhances data exploration and decision-making

ADVANTAGES

- Enhances data visualization and insights.
- Helps in quick decision-making with real-time updates.
- Saves time in data analysis and reporting through visual representation.
- Allows interactive filtering with slicers.
- Customizable and scalable for business needs.

LIMITATIONS

- Performance issues with very large complex datasets
- Needs Excel proficiency for effective use.
- Requires manual data updates periodically.
- Limited advanced analytics compared to BI tools.
- Dependent on the accuracy and completeness of the input data.

CONCLUSION

Successfully developed an interactive dashboard for **Chitra Collections** that simplifies data analysis and enhances decision-making. While Pivot charts and slicers provide clear insights into sales trends and customer behavior that helps the business to track performance and improve strategies efficiently.

Future Scope:

- Automating data updates for real-time insights.
- Integrating with Power BI for more advanced analytics.
- Expanding dashboard with predictive analysis and AI-driven insights.
- Adding more slicers and filters to allow for more granular data analysis.

THANK YOU

Grateful to MCKV Institute of Engineering for the opportunity to pursue industrial training at Ardent Computech Pvt. Ltd. Special thanks to my mentor and all the teachers for their support and guidance.

Thank you so much everyone for your time and attention.

~Sayantani Dalui
